

Clim
EMPOWER

Did you know series

#1

Resilience indicators help regions understand how prepared they are for climate risks.

Did you know that climate risk depends not only on the hazard itself, but also on who and what is exposed – and how vulnerable they are?

#2

Climate decisions are stronger when data comes together.

Did you know that ClimEmpower reviewed 531 climate resilience indicators to identify what really helps regions understand their resilience?

DECISION

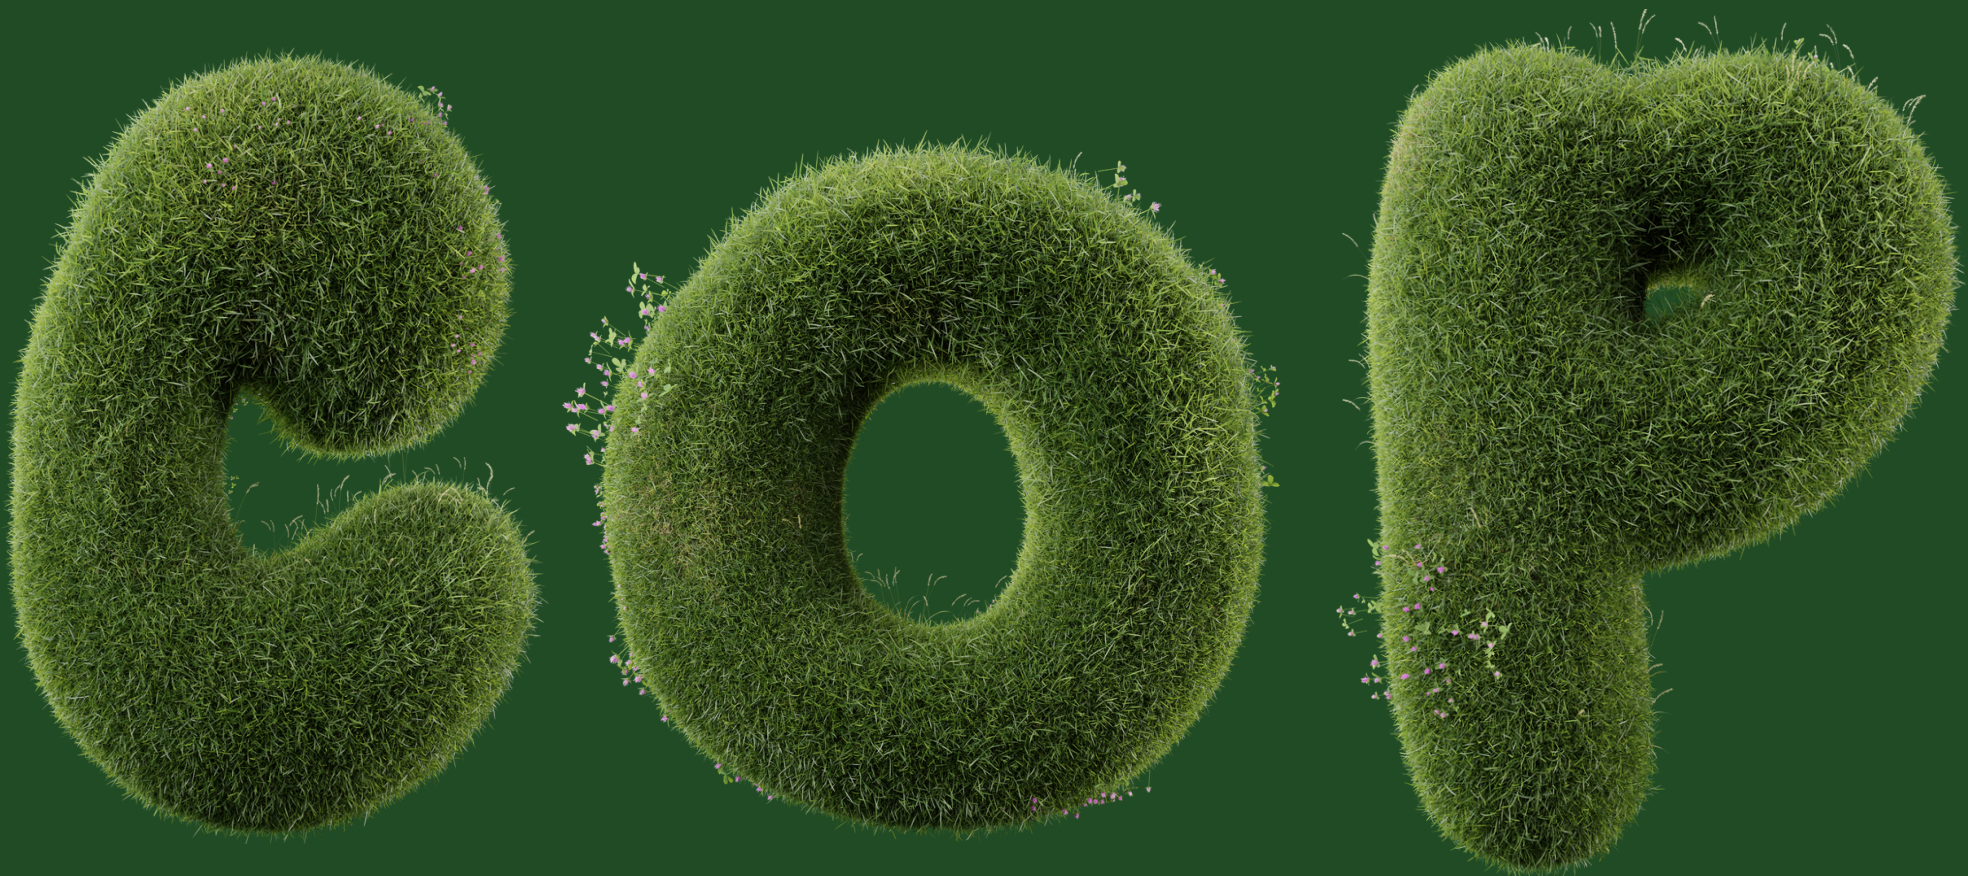

Funded by the European Union. Views and opinions expressed are however those of the author(s) only and do not necessarily reflect those of the European Union or CINEA. Neither the European Union nor the granting authority can be held responsible for them.

#3

Communities of Practice bring people together to solve climate challenges.

Authorities, researchers, businesses and communities collaborate to co-design solutions.

Did you know that the same climate hazard can create completely different risks in different regions?

#4

Climate impacts are local — so solutions must be too.

Each ClimEmpower region tests tools adapted to its own risks and priorities.

Flood risks, drought, wildfires or heatwaves — every region needs tailored resilience strategies.

Did you know that ClimEmpower explored around 20,000 wildfire and fire-danger social media posts to test how social sensing can complement traditional climate data?

#5

The ClimEmpower Toolbox helps turn data into action.

**Good climate decisions need practical tools.
That's where ClimEmpower comes in.**

Did you know that ClimEmpower brings climate data, risk maps, resilience indicators and recommendations together so regions can move from “What is happening?” to “What should we do?”

Funded by the European Union. Views and opinions expressed are however those of the author(s) only and do not necessarily reflect those of the European Union or CINEA. Neither the European Union nor the granting authority can be held responsible for them.
